

NATIONAL CORE CURRICULA FOR EDUCATION

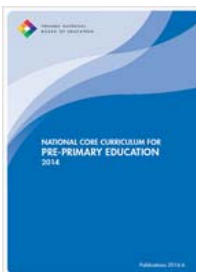

The Finnish National Agency for Education draws up the national core curricula for pre-primary education, basic education, general upper secondary education and basic education in the arts, as well as the curricula for preparatory education for immigrants and morning and afternoon activities for school children. The curricula set out the key objectives, content and policies of education. The national core curricula create a progressive continuum in a coherent way and provide a strong basis for lifelong learning. Education providers and schools draw up their own local curricula based on the national curricula.
