### Project title: Combining Overseas Mobilities for Better Outcomes (COMBO)

**Coordinator**

**Metropolia University of Applied Sciences**  
Department of Electrical Engineering and Automation Technology  
**Heikki Valmu**  
heikki.valmu@metropolia.fi

The rapidly shifting technological advances of the 4th industrial revolution present tremendous opportunities and unpredictable possibilities for the next generation of engineers. Therefore, the COMBO project is a specific response to such new real-world requirements of enhanced creativity, interdisciplinary engagement, intercultural awareness, innovative solutions, cross-border competitiveness, and global social responsibility that combines and synergizes the complementary educational and engineering strengths of Finland and South Korea through implementing a new undergraduate double degree in electronics engineering.

**Partners**

**Kyungpook National University (KNU)**

Building on a successful foundation of student and staff exchanges between Metropolia University of Applied Sciences (MUAS) and Kyungpook National University (KNU), the COMBO project is intended to take the MUAS / KNU partnership onto a new strategic level involving the mutual recognition of credits for degree awards and an alliance of best practice for teaching and learning, internationalization, and cooperation with industry.
