The main objective of this project is to consolidate the cooperation between the partner institutions in developing health care quality by the means of improving safety practices and by investigating the possibilities of IT-technological solutions related to adverse events reporting in order to improve patient safety. Specific objectives of the project are:

A. To exchange best practices in teaching health care safety practices and quality management in both project participating countries.

1. To familiarize the master students in both partner institutions into health care safety best practices and related IT-technological solutions related to prevent adverse events and enhance adverse events reporting in patient safety.

2. To identify most urgent needs in developing health care safety, related IT-technological solutions and business potential related to adverse events reporting in patient safety.

B. To increase cultural knowledge of health care students and teachers

1. about both countries cultural traditions related to health care practices and services.

2. about both countries health care safety practices and quality management practices and traditions.

C. To increase knowledge about interprofessional co-operation between health care, business and IT-professionals in the field of health care safety practices and quality management.
